closeting partial-data sets respectively corresponding to different ones of the articles;

generating a new image by merging representations of the different ones of the articles with the structure by forming an image of a merged item including representations of both the structure and a selected article.

4. (*Amended*) An arrangement for on-line viewing of an article on another structure, comprising:

means for providing a host computer accessible to an on-line viewer and web-linkable to at least one article-provider site, the article provider-site having images of articles for view via the web;

means for linking the on-line viewer to the host-site and selecting a structure in response to a command received by the on-line viewer;

using the host computer, means for linking the viewer to the at least one article-provider site and passing images from that site for view by the on-line viewer;

means for closeting partial-data sets respectively corresponding to different ones of the articles;

means for generating a new image by merging representations of the different ones of the articles with the structure by forming an image of a merged item including representations of both the structure and a selected article.

18. (*New*) The method for on-line viewing of an article on another structure, according to claim 1, wherein the structure is an apparel-wearable model, and the selected article is apparel.

19. (*New*) The arrangement for on-line viewing of an article on another structure, according to claim 4, wherein the structure is an apparel-wearable model, and the selected article is apparel.
